

ENRIE JOHN EDEM

Infrastructure & Platform Engineer | Linux | Proxmox VE | Automation | IaC

Parañaque City, Metro Manila, PH | +63 950 465 6709 | enriejohnedem@gmail.com | [linkedin.com/in/enrie-john-edem-6073a8223](https://www.linkedin.com/in/enrie-john-edem-6073a8223) | enrie-portfolio-vercel.vercel.app

PROFESSIONAL SUMMARY

Infrastructure and platform engineer with four years administering a 7-host bare-metal Proxmox VE environment (24 production LXC containers and 12 Linux/Windows VMs) supporting approximately 700 staff at a Japanese manufacturing affiliate. Cut provisioning time by approximately 93% with reusable Ansible and Terraform automation, built self-hosted CI/CD and restore-tested MySQL backup workflows from scratch, and self-initiated a parallel Proxmox VE platform alongside the incumbent VMware estate, projected to avoid over ₱8M in licensing. Applies the same Kaizen/MUDA-elimination approach beyond infrastructure, most recently shipping five self-initiated Microsoft 365 Copilot agents. AWS Certified Cloud Practitioner in progress.

TECHNICAL SKILLS

Infrastructure Proxmox VE, LXC, KVM, Docker, VMware, Linux administration (AlmaLinux / RHEL-compatible, Ubuntu, Debian), Windows Server 2016/2025, backup & recovery

Automation & IaC Ansible, Terraform (bpg/proxmox), Bash, Python, Infrastructure as Code

CI/CD & Services Git, Gitea, Gitea Actions, MySQL/MariaDB, Nginx, Apache, SSH

AI Tooling Microsoft 365 Copilot Studio, declarative agents, Agent Builder, instruction and knowledge-grounding design

Development PHP/Laravel, Vue 3, Inertia.js, Java/Spring Boot, JavaScript, SQL, REST APIs

Practices RBAC, incident troubleshooting, root cause analysis, UAT, technical documentation, Kaizen/MUDA elimination

PROFESSIONAL EXPERIENCE

Philippine EDS Techno-Service Inc. (Yazaki Japan Affiliate)

Parañaque City, Philippines

Promoted twice since joining in August 2022

Infrastructure & Systems Engineer (official title: Senior Technical Support Analyst)

Oct 2025 - Present

- Administer a 7-host bare-metal Proxmox VE environment (24 production LXC containers and 12 Linux/Windows VMs) supporting approximately 700 staff; senior escalation point for server and application incidents across regional affiliates.
- Cut VM and LXC build-to-ready provisioning time by approximately 93% using reusable Ansible playbooks and Terraform modules (bpg/proxmox provider), standardizing deployments and eliminating configuration drift.
- Proposed and built a parallel Proxmox VE platform alongside the incumbent VMware estate, rebuilding production services natively rather than converting VMs. Costed and pitched as a Kaizen/MUDA-elimination initiative, projected to avoid over ₱8M in commercial virtualization licensing.
- Built a self-hosted Gitea and Gitea Actions platform on AlmaLinux automating build, test, and deploy for Laravel/Vue apps; automated encrypted MySQL backups with restore-tested recovery procedures.
- Self-initiated and rolled out five Microsoft 365 Copilot agents (Jul 2026) at zero additional licensing spend (detailed below).
- Manage Docker workloads for containerized in-house applications, and sustain legacy Windows Server systems while planning phased Linux migrations.

Systems & Application Engineer (official title: Junior Technical Support Analyst)

Aug 2023 - Oct 2025

- Provisioned, secured, and operated Linux VMs and unprivileged LXC containers for internal application hosting, establishing repeatable container conventions.
- Built Laravel, Vue 3/Inertia.js, and Spring Boot applications, including a purchasing management system with role-based access control and multi-level departmental approval workflows.
- Automated recurring deployment and maintenance tasks in Bash and Python; led UAT coordination and authored deployment, configuration, and application documentation.

Application Developer (official title: Associate Technical Support Analyst)

Aug 2022 - Aug 2023

- Developed and maintained internal Java and PHP applications supporting affiliate business operations.
- Resolved system requests, defects, feature enhancements, and day-to-day IT operational incidents for regional affiliates.

KEY PROJECT: MICROSOFT 365 COPILOT AGENT SUITE (2026)

- Self-initiated Kaizen/MUDA-elimination effort: five Copilot Studio and Agent Builder agents, each with a distinct instruction and skill set. Coverage spans Japanese-ticket technical analysis, Proxmox/DevOps operations support, root cause analysis and countermeasure documentation, web application planning, and supervisor support.
- The ticket agent converts Japanese support tickets into domain-aware technical English analysis for engineers with no Japanese, grounded in an archive of past tickets with human translations plus a knowledge-base lookup before generation.
- Factored a reusable evidence-only instruction preamble across agents (clarifying questions over speculation), keeping each within Copilot instruction-length limits.

EDUCATION

Bachelor of Science in Information Technology, Bohol Island State University

2018 - 2022

Balilihan Campus, Bohol | Official campus website programmer & designer | Proficient Student Award | Outstanding Contribution to ICT Services Unit, 2022

CERTIFICATIONS & TRAINING

- AWS Certified Cloud Practitioner (CLF-C02)**, exam preparation in progress, 2026
- VMware Horizon 8: Deploy and Manage (40 hours, Jun 2023) | Mastering Linux (Udemy, Dec 2023) | Laravel 10 (Udemy, Dec 2023)

Certificate portfolio: drive.google.com/drive/folders/1mtCuulRy9rasQwtW_M7ZsSYfULydyY99
