PROFESSIONAL SUMMARY

Infrastructure and systems engineer with 4 years designing, automating, and operating production Linux infrastructure for a Yazaki Japan manufacturing affiliate. Sole administrator of a 7-host bare-metal Proxmox VE cluster (24 LXC containers, 12 VMs) supporting systems used by ~700 staff. Cut environment provisioning time by ~93% through Ansible and Terraform automation, built the company's self-hosted Git and CI/CD platform from scratch, and delivered internal Laravel/Vue business applications end to end — bridging development and operations in a single role. Currently pursuing AWS certification (CLF-C02 → SAA-C03).

CORE SKILLS

Virtualization & Infrastructure: Proxmox VE (7-host cluster administration), LXC, KVM, VMware, Docker, Linux server hardening, backup & disaster recovery

Automation & IaC: Ansible, Terraform (bpg/proxmox provider), Bash, Python, PowerShell, Gitea Actions CI/CD, WinRM

Software Development: PHP/Laravel, Vue 3, Inertia.js, Java/Spring Boot, JavaScript, SQL, Redis, Tailwind CSS, REST APIs

Operating Systems: AlmaLinux/RHEL, Ubuntu Server, Debian, Windows Server 2016/2025

Databases & Services: MySQL/MariaDB, Nginx, Apache, Git/Gitea (self-hosted), SSH

Practices: Infrastructure as Code, RBAC & approval-workflow design, root-cause analysis, technical documentation, UAT coordination, mentoring

PROFESSIONAL EXPERIENCE

Philippine EDS Techno-Service Inc. (Yazaki Japan Affiliate) — Parañaque City, PH

Senior Technical Support Analyst (Infrastructure & Systems Engineering)

Oct 2025 – Present

- Own end-to-end administration of a 7-host bare-metal Proxmox VE cluster (5 development, 2 production hosts) running 24 LXC containers and 12 VMs hosting business-critical systems for ~700 staff; serve as final escalation point for server and application incidents across regional affiliates.
- Reduced environment provisioning time by ~93% by codifying VM/LXC builds into Ansible playbooks and reusable Terraform modules (bpg/proxmox provider), eliminating manual configuration drift and standardizing every deployment.
- Designed and deployed the company's self-hosted version control and CI/CD platform (Gitea + Gitea Actions runners in host mode on AlmaLinux), enabling automated build, test, and deployment pipelines for Laravel + Vue applications; authored the internal runbook now used to onboard each new system.
- Built an automated, encrypted MySQL backup pipeline for production databases with verified restore procedures, closing a previously manual and unaudited backup process.
- Avoided over ₱8M (~US\$140K) in projected commercial licensing costs by architecting production workloads on an open-source virtualization stack.
- Architecting a unified Laravel/Vue infrastructure control plane consolidating inventory/CMDB, provisioning, automation jobs, backup status, and audit logging into a single governed internal tool.
- Maintain legacy Windows Server applications while executing phased migrations to Linux-based replacements.

Junior Technical Support Analyst

Aug 2023 – Oct 2025

- Provisioned, secured, and operated Linux VMs and unprivileged LXC containers on Proxmox VE for in-house application hosting, establishing the container conventions still in production use.
- Developed internal web applications on Laravel + Vue 3/Inertia.js and Spring Boot, including a Purchasing Management System with role-based access control and multi-level approval workflows serving multiple departments.
- Automated routine server operations with Bash and Python deployment and maintenance scripts, reducing recurring manual workload.

- Coordinated User Acceptance Testing with end users across departments; incorporated feedback into iterative releases.
- Produced technical documentation covering deployment procedures, system configuration, and application features.

Associate Technical Support Analyst

Aug 2022 – Aug 2023

- Developed and maintained in-house Java and PHP applications supporting affiliate business operations.
- Handled system requests, bug fixes, and feature enhancements raised by Yazaki affiliates across the region.
- Assisted daily IT operations, application support, and incident resolution.

EDUCATION

Bachelor of Science in Information Technology

2018 – 2022

Bohol Island State University – Balilihan Campus, Bohol, Philippines

- Programmer and designer of the official campus website; awarded Outstanding Contribution to ICT Services Unit and Proficient Student Award (2022).

CERTIFICATIONS & TRAINING

- **In progress (2026):** AWS Certified Cloud Practitioner (CLF-C02), followed by AWS Solutions Architect – Associate (SAA-C03)
- Company technical training: Linux Administration (Dec 2023) · Laravel (Dec 2023) · VMware (Jun 2023)
